Hi Paul,

Sorry for the delay in getting back with you. In answer to your questions: yes, there are some groundwater summary tables available and I will try to get a copy and send it to the group (although it may be next week before I can get to it); and yes, the RP in my experience has been fairly easy to deal with. Although I will say that most of my interaction has been through its legal counsel (Phil Grashoff) and the consultant (Bay West). Realize that some of the ease may be due to the fact that they are operating under a RAP, so I haven't really had to push them on doing anything. I'd be happy to talk with you guys about what you need and then arrange a conference call with all parties involved, if you would like. Let me know what works for you.

Thanks,

David,

In a recent discussion on the Allied Operable Unit, the Strebtor and Panelyte site data came up. This email is primarily an introduction between you and the EPA RPM for the site, Michael Berkoff. Some initial questions we have are:

- Do a couple of summary tables exist for the Strebtor site that will provide us with a basic understanding of the groundwater conditions for the site wells?
- How easy are the RPs to work with? EPA and their contractors will be interested in getting access to the Strebtor wells to collect SWLs and groundwater data.

Perhaps a brief initial call is in order, to get us all oriented.

Thanks

Hi Paul,

Yes, I'm actively involved with Strebtor (Glaxo-Smith Kline, Bay West, and Phil Grashoff [attorney]) and Panelyte would be mine as well, although there isn't anything going on at that site that I've been involved in. Let me know what I can do to help.

Thanks,

Dave,

Are you the PM for Strebor and Panelyte in Kzoo near Portage Creek and Alcott St? I will probably need some district help getting at these locations to do some sampling. Please advise.

Paul
